

# Delete an Object

Last Modified on 05/04/2022 9:55 am EDT

Depending on their [role permissions](#), both administrators and end users can delete objects. However, before an object can be deleted, you must review the **Deletion Request** warning, which outlines how deleting that specific object impacts other objects connected through relationships or references.

An object cannot be deleted when it's viewed on a navigation form or from the rightside editor palette.

## To delete an object:

1. Open the object form in full screen mode.
2. Click the  icon at the form's top-right, then click **Delete**.
3. Review the **Deletion Request**, which summarizes the number of impacted relationships and references.
4. Once you've ruled out negative impacts on those related/reference objects, click  to confirm.

A screenshot of a web form titled "Policy Compliance". The form has a header with the title and a "Delete" button in the top right corner, which is highlighted with a green box. Below the header, there is a blue pill-shaped button with the text "R-111.2". The main content area is titled "Assess and Treat Risk" and contains a paragraph of text: "The risk profile provides a comprehensive understanding of your risk, including risk assessments, controls, issues and risk treatment." Below this is a "Description" section with a text box containing the text: "Failure to provide monitoring controls against policy can negatively impact the ability of management to maintain the integrity of internal controls. This could promote fraud, compliance risk and loss of revenue." At the bottom, there is a "Risk Owner" field.

*The Delete option at the top-right of the page.*

Deleting an object with relationships or references will delete that object's connection to those other objects, but it will **not** delete the other objects to which it was related.
