

# State Triggers on Forms

Last Modified on 04/19/2022 11:12 am EDT

Adding [triggers](#) to a standard form will place a button on the form that a user can click to move the object from one state to another. Triggers are configured in an object type's workflow. Read more here: [Workflows](#).

The screenshot shows a 'Create Incident' form with the following fields and buttons:

- A large empty text area at the top.
- A 'First Name' label above a text input field.
- A 'Last Name' label above a text input field.
- A 'Contact Information' label above a larger text area.
- A purple button labeled 'SAVE AS DRAFT'.
- A green button labeled 'SUBMIT FOR REVIEW'.
- A 'CANCEL' link at the bottom right.

*Two triggers on a standard form.*

Because triggers must be associated with a state, you can add multiple triggers to a standard form, but a trigger will appear only when the object is in the state associated with the trigger. For example, users won't see the Request Additional Info trigger on the form while an object is in the Draft state because the trigger is related to the In Review state.

At a minimum, you must add a trigger associated with the **Creation state** to a standard form so users can save the object by transitioning it out of the entry state.
