

## **Edit or Delete a Role**

Last Modified on 11/18/2024 5:40 pm EST

# Overview

**Roles** control the data that users can create, edit, delete, view, or manage in Resolver. Administrators can edit or delete roles from Resolver.

**D**IF a user is in multiple roles and the permissions are in conflict, the role with the higher level of permissions will take precedence.

#### **User Account Requirements**

The user account used to log into Resolver must have Administrator permission to access the **Data Access** section.

#### **Related Information/Setup**

Please refer to the Roles Overview and the Create a New Role articles for more information on using roles in Resolver.

#### Navigation

1. From the *Home* screen, click the **Administration** icon.

2. From the Administrator settings menu, click Admin Overview.

Remove Button

Warning:

Roles determine a user's eligibility to access objects only. Removing a user from a role with explicit permissions after they've been granted direct access to an object does **not** automatically revoke their access to that object. Another user with the appropriate permissions must revoke access by removing the user from the role field on the object's form.

- (Optional): In the Advanced Options section, you can select which advanced options to to enable or disable for users within the role. Please refer to the Advanced Options on Roles article for more information.
- 6. Click the **Done** button to save your changes.
