

Assessment Context (Other) on Forms

If you're creating a configurable form for an [assessment](#), you must include the **Assessment Context** element, which will add fields for the assessment's [dimensions](#) onto the form. If this element is not added to the form, you will not be able to successfully create a new assessment object.

This element is not available to forms for non-assessment object types.

The image shows a screenshot of a form element titled "Assessment Context". It contains two dropdown menus. The first is labeled "Select Process" with a help icon (question mark) and contains the text "Search for a Process" and a downward arrow. The second is labeled "Location" with a help icon and contains the text "Select one..." and a downward arrow. To the right of the "Location" dropdown is a grey button with a white "x" icon, likely for clearing the selection.

The Assessment Context element on a form. This element adds the assessment's dimensions to the form, which are required when creating a new assessment instance.
