

Edit or Delete a Data Definition

Last Modified on 06/13/2024 11:35 am EDT

Overview

An active Data Definition can be deleted from Resolver if you remove the Data Definition from the Data Visualization or Assessment. You will receive a system-generated message indicating that the Data Definition is currently in use if you try to remove a Data Definition before removing it from the Data Visualization or Assessment.

Users can now add additional elements to a Data Definition if Reports or Orchestration Event Actions do not currently use it. Otherwise, Data Definitions can be edited by extending the path. System-generated messages will now indicate when additional elements can be added and when a Data Definition is used.

Note: Previously selected data points cannot be removed.

User Account Requirements

The user account you use to log into Resolver must have Administrator permission to use the Data Definition feature.

Navigation

1. From the *Home* screen, click the **Administration** icon.

	(Q Search	<u>ک</u> ۵ 🕸 🚥
Home	✓ My Tasks	_

2. From the *Admin: Overview* screen, click the **Data Definition** tile under the *Data Model* section.
