

## About Applications Overview

Core is designed to help you collect and analyze data for several scenarios or circumstances. To do so, a data structure and workflow must be in place to ensure data is effectively collected, filtered, assigned, reviewed, and analyzed through one or more applications.

Applications and object type workflows control the movement of the data and are created when object types, object type groups, assessments, fields, configurable forms, and roles come together to make [activities](#) , which is where a user must perform a task (through an [action](#) ) or view objects or data visualizations (through a [view](#) ).

Access to applications and its activities is granted through a user's [role](#) permissions. Once permission is granted, users can view the applications and activities through the [nav bar](#) .

The screenshot displays the RESOLVER application interface. At the top, there is a navigation bar with the RESOLVER logo, a search bar, and user profile icons. Below the navigation bar, the 'Incident Reporting' application is selected, and the 'Report an Incident' activity is active. The main content area is titled 'Incident Reporting: Report an Incident' and contains a 'REPORT AN INCIDENT' section with a 'CREATE NEW INCIDENT REPORT' button. Below this is a 'MORE INFORMATION REQUIRED' section listing four incidents with their IDs, descriptions, and dates, each with an 'Additional Info Required' button.

Incident ID	Description	Date	Action
I-6	IC/Health Issue	2016/08/18	Additional Info Required
I-7	SB/Accident	2016/07/11	Additional Info Required
I-13	IC/Vehicle Collision	2016/10/28	Additional Info Required
I-19	KD/Lost	2016/10/31	Additional Info Required
