

# Adding Form Elements to a Standard Form

Last Modified on 01/13/2025 2:08 pm EST

## Overview

Elements (e.g., fields, relationships, formulas.) can be added to forms in Resolver.

When creating forms for use in a repeatable form, only forms with supported elements will be displayed. See the [Add Repeatable Forms to a Report](#) article for a list of unsupported elements.

Fields, relationships, references, formulas, and/or roles can only be added to a form after they've been added to the object type as components.

## User Account Requirements

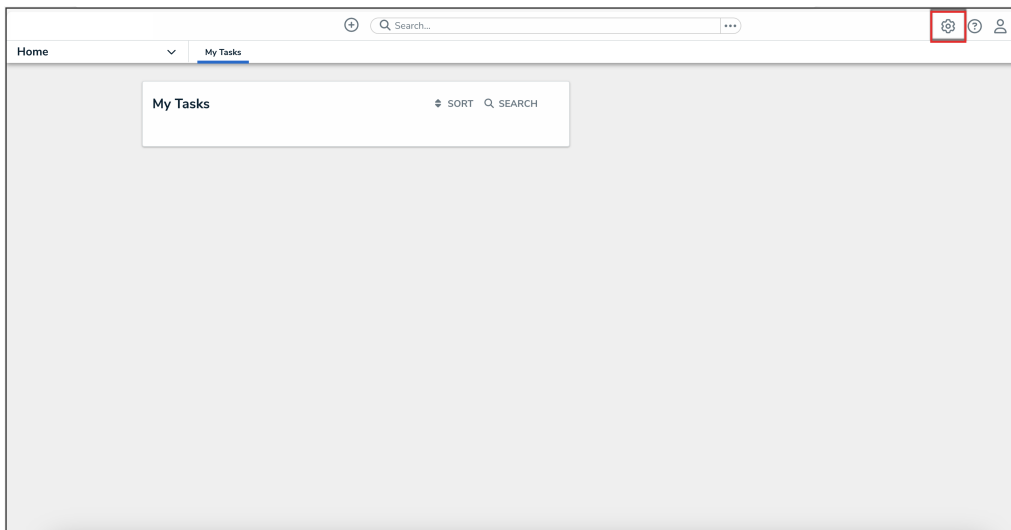

The user must have Administrator permissions to access the **Views** section on the **Admin Overview** screen.

## Related Information/Setup

For more information about Standard Forms, read the [Standard Forms Overview](#) article.

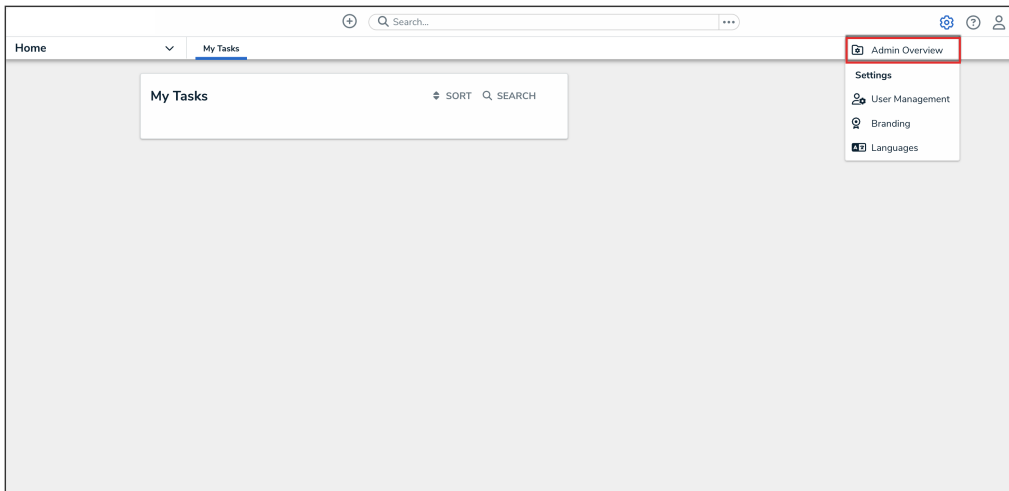

## Navigation

1. From the **Home** screen, click the **Administration** icon.

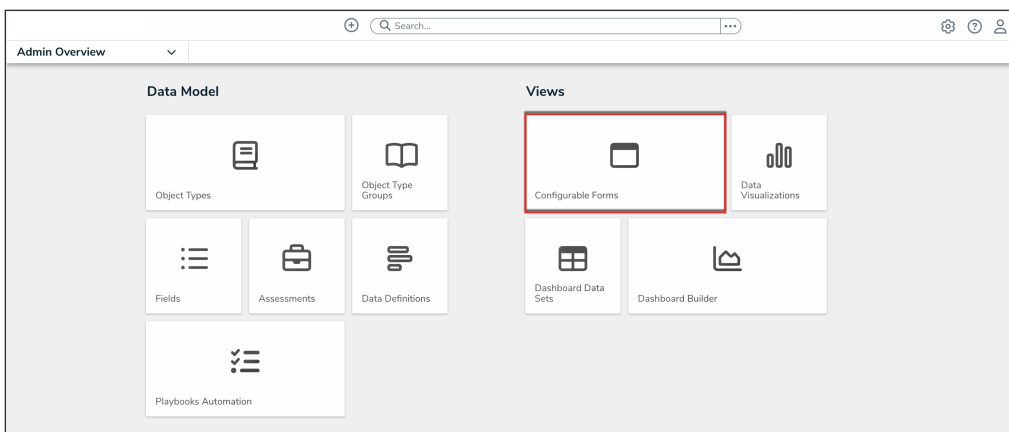

*Administration Icon*

2. From the **Administrator Settings** menu, click **Admin Overview**.

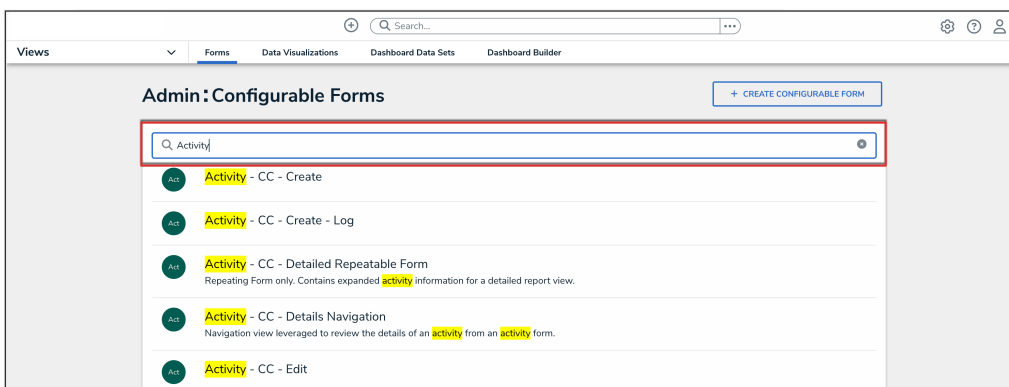

*Administrator Settings Menu*

- From the **Admin Overview** screen, click the **Configurable Forms** tile under the **Views** section.

*Configurable Forms Tile*

- From the **Configurable Forms** screen, enter a form name in the **Search** field to narrow down the forms list.

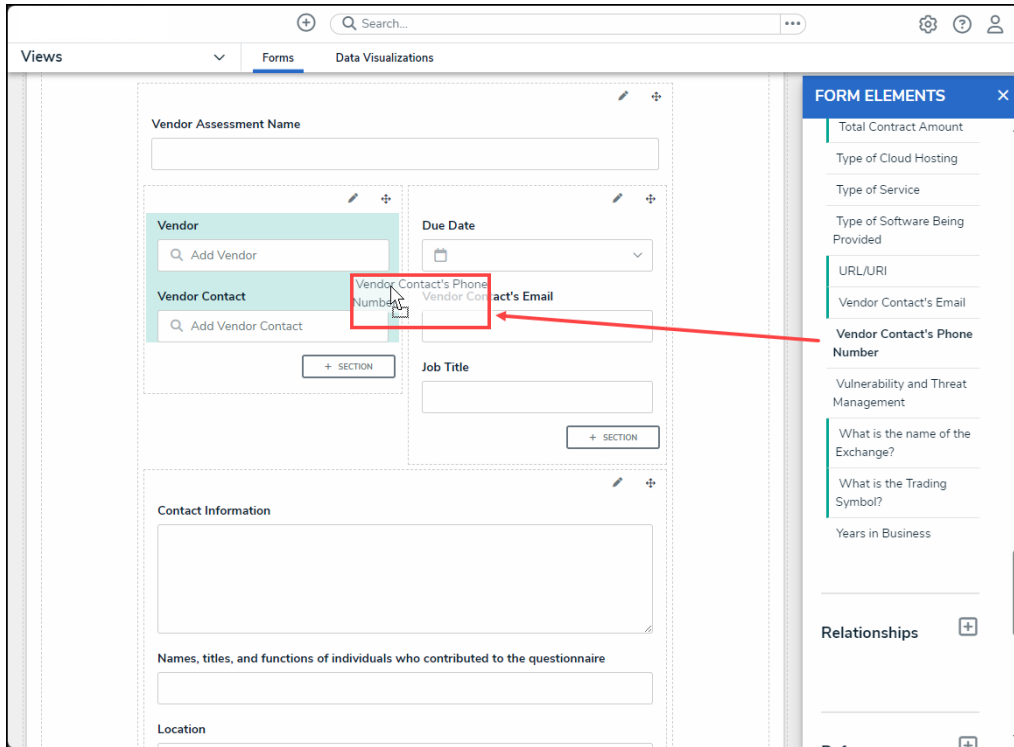

*Search Field*

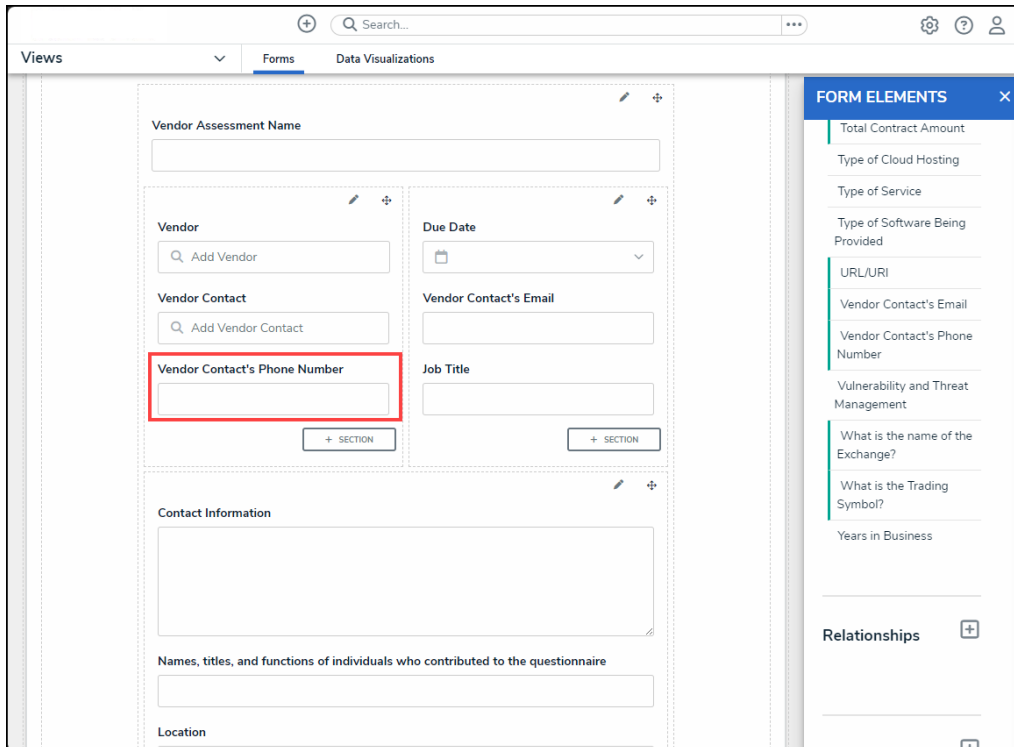

5. Click the form that you want to edit.

## Adding Form Elements to a Standard Form

1. From the **Form Elements** section, drag and drop an element from the list on to a form card and/or section.

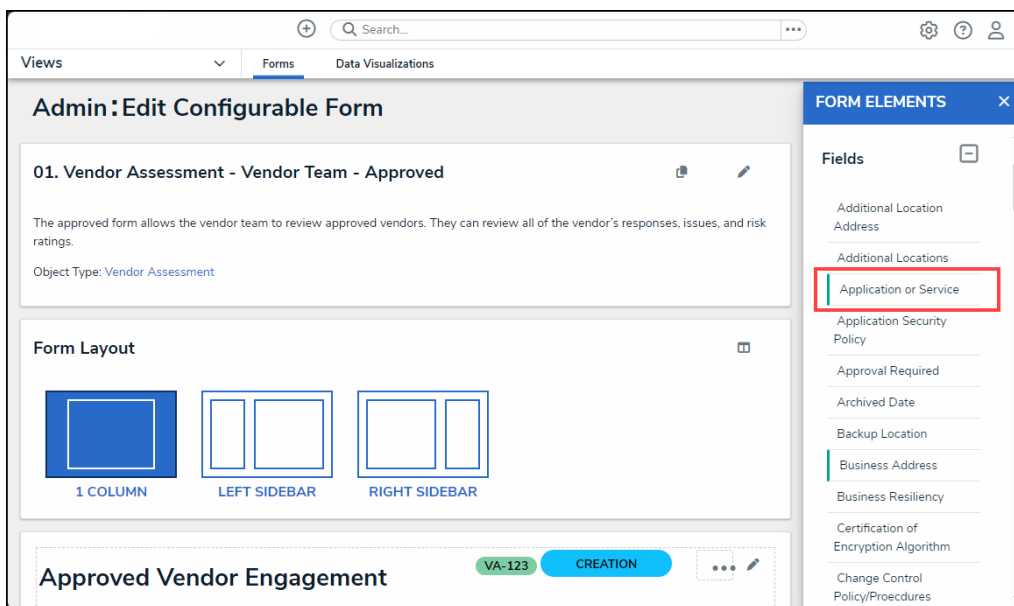

Dragging Element from the Form Elements Section

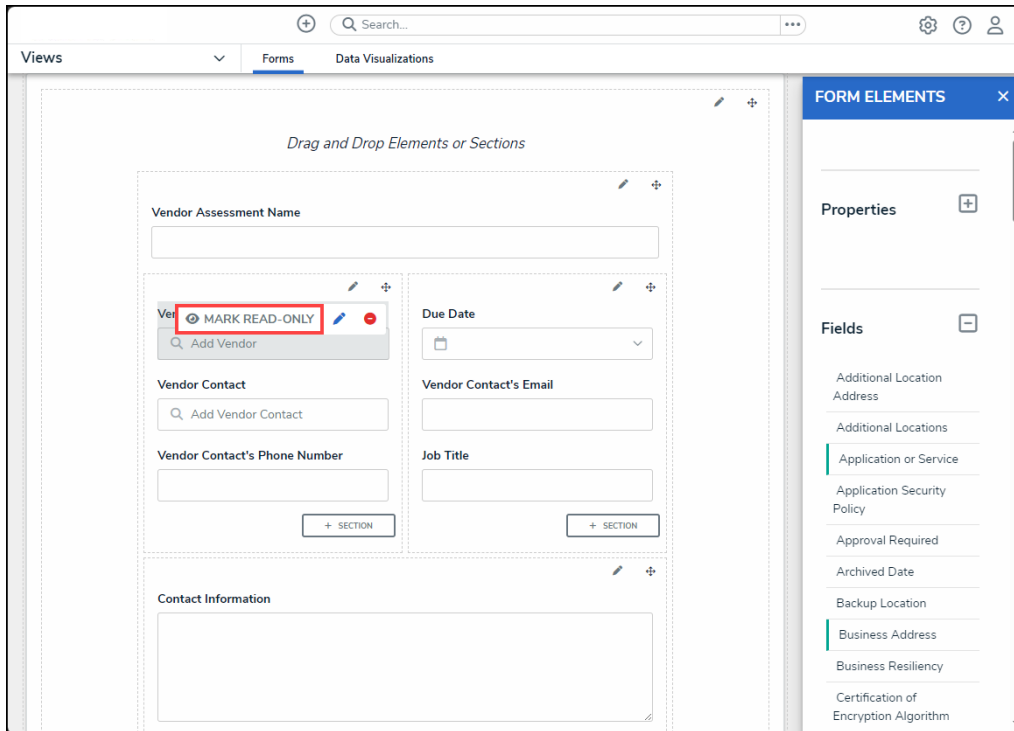

Dropping Element onto Form Card/Section

2. Elements already added to the canvas will have a green line next to their names.

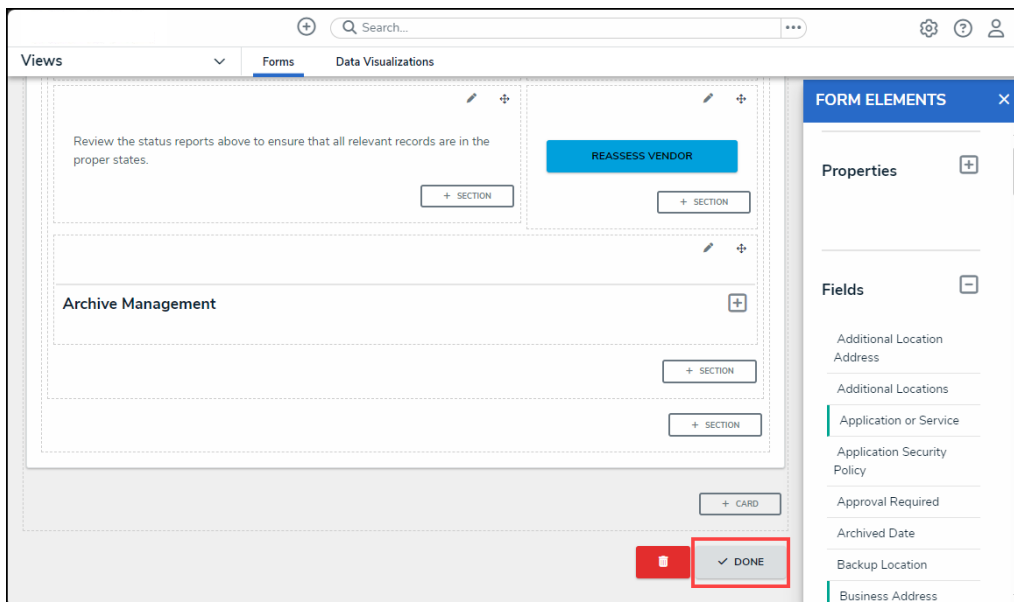

*Element Added Indicator*

3. To mark an element as read-only, hover your cursor over the element in the canvas, then click the **Mark Read-Only** button.

*Mark Read-Only Button*

4. To make an element editable again, hover your cursor over the element and click the **Remove Read-Only** button.
5. Click the **Done** button to save your changes.
