

Important Notes About This Guide

This guide is designed to help users assess their organization's risks in Compliance Management. These instructions are broken down based on the out-of-the-box [user groups](#). Depending on the settings applied to your profile, **you may not be able to edit some or all the settings and features referenced in this guide.**

Additionally, the screenshots used and the [applications, activities, object types, and other elements](#) referred to are not specific to your organization, so your version of the user interface may differ.

RCM frameworks are only available if your organization has purchased the Compliance Management app with [RCM](#). Otherwise, you will need to create your own frameworks. Contact [Resolver Support](#) for more information.
