

Edit or Delete a Mapped Device

Last Modified on 06/01/2020 5:36 pm EDT

Deleting a mapped device from the **Map Devices** page only deletes the icon from the selected floorplan image. To delete a device, see [Edit or Delete a Device](#).

To edit or delete a mapped device:

1. Click **Device Mapping** to display the **Map Devices** page.
2. In the field to the right, begin typing the name of the location or indoor location where the device is mapped, then click to select the location. Once a location is selected, its floorplan or map image is displayed along with icons representing any previously mapped devices.
3. To increase the size or rotate the icon on the image, click the icon, then click **-** or **+** to make the icon smaller or larger or click the **↺** or **↻** to rotate the icon.
4. To reposition a device, click the **Map** button beside the device in the section to the left of the image, then click an area on the image to re-place the icon.
5. To delete the icon, click the **✖** beside the device in the section to the left.
