Add Tags to an Event Type

Last Modified on 06/01/2020 5:37 pm EDT

Tagging allows you to group events together, which then makes it easy to search for event types or to select multiple event types when creating rules.

To add tags to an event type:

1. Click **Event Types** to display the **Event Types** page.

> *i*   If the **Event Types** page is not displaying any event types or is displaying incorrect information, you may need to regenerate the data. See Generate Devices & Event Types for more information.

2. If necessary, enter search terms in the **Search table...** field to filter the event types or sort the table by clicking on a column.

3. Select the checkboxes beside the event types you wish to add tags to or click **Select All** to select all event types that are currently being displayed on the page.

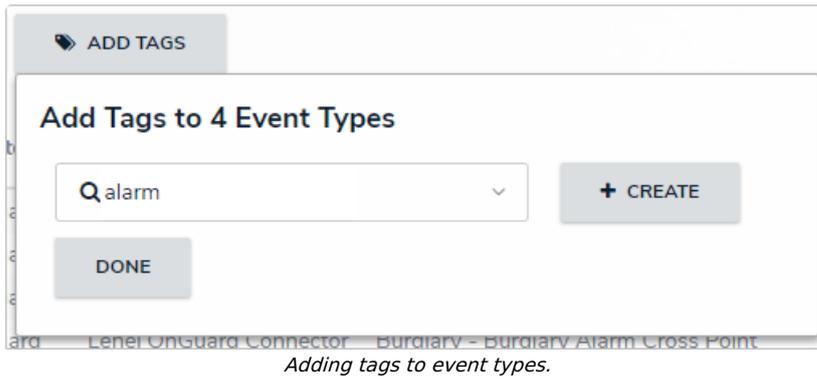

EVENT TYPES

	Source System	Connector Name	Event Type Name	Event Type Tags	Event Type ID
☑	Lenel OnGuard	Lenel OnGuard Connector	Area APB - Area Alarm - Confirmed		3-11
☑	Lenel OnGuard	Lenel OnGuard Connector	Area APB - Area Alarm - Unconfirmed		3-10
☑	Lenel OnGuard	Lenel OnGuard Connector	Burglary - Burglary Alarm		21-0
☐	Lenel OnGuard	Lenel OnGuard Connector	Burglary - Burglary Alarm Cross Point		21-1
☐	Lenel OnGuard	Lenel OnGuard Connector	Burglary - Burglary Alarm Restore		21-2
☑	Lenel OnGuard	Lenel OnGuard Connector	Burglary - Silent Burglary Alarm		21-13
☐	Lenel OnGuard	Lenel OnGuard Connector	Burglary - Silent Burglary Alarm Restore		21-14

Selected event types.

> *i*   Clicking **Select All** only selects the event types displayed on the page.

4. Click **Add Tags**.

5. Type a tag label, then click **Create** to create a new tag or select an existing tag from the field. Continue adding tags as needed.

Adding tags to event types.

6. Click **Done** when finished.
