C-CURE Connector System Requirements

Last Modified on 01/30/2024 8:50 am EST

C-CURE® Connector System Requirements

- C-CURE versions 2.7 and 2.9
- Windows®10, Windows Server 2016, or 2019
- 4GB of memory
- 2Ghz dual-core process
- Microsoft .NET Framework 4.8 or higher
- Installation and configuration of Connect and the Dispatch connector

For Hosted Customers

- a firewall rule to allow outbound communication to Resolver's hosted environment

---

Other Important Notes

- Resolver recommends installing the Connector on the C-CURE source server. If outbound connections from that server are not possible, the Connector will require a standalone server.
- Install C-CURE and the C-CURE Connector on your C:/ drive.
- The C-CURE Connector also requires the installation of a plugin.
- The plugin requirements vary depending on the version of C-CURE installed on your system.
- Install the C-CURE plugin on the C-CURE source server.
- Refer to the Software House® documentation for your version of C-CURE for more information.
