

Version 3.0.2 Internal Release Notes

Last Modified on 02/25/2020 3:24 pm EST

× This article is for internal use only.

Improvements

- Deleting an object no longer recalculates inferred permissions when that object is not part of an inferred permission group.
- Improved calculations on formulas used to control section visibility on forms with the "Only If" option selected.

Bug Fixes

- Corrected an issue that caused inconsistent org filtering on Pendo banners and notifications.
- Fixed a bug that cleared the inferred permissions path on an object type after clicking Done on the Edit Role Permissions palette.
