

# Dispatch Window Maximizing Off-Screen

Last Modified on 08/01/2023 9:39 am EDT

If you're running Dispatch on multiple monitors with different resolutions, you may encounter an issue that causes the application window to maximize slightly off-screen on the larger resolution monitor.

To avoid this, Resolver recommends dispatchers run the application on two monitors both with a **minimum** resolution of 1680x1050. For the **best** Dispatch experience, two monitors both with a resolution of 1920x1080 are recommended.
