

Version 3.0.4 Internal Release Notes

Last Modified on 05/01/2020 4:25 pm EDT

× This article is for internal use only.

Improvements

- Infrastructure improvements to help ensure dispatches in Command Center are closed as expected.
- JSON data imports through the API now support replacing relationships.
- To prevent whitelisting issues, the geolocation library is now loaded via a package instead of a script.

Bug Fixes

- Entering 0 in a numeric field marked as required no longer prevents the object from transitioning to the next workflow state.
- Nightly triggers no longer update an object's Modified On date if no changes were made.
