Introduction

Last Modified on 12/23/2024 11:11 am EST

Business continuity plans (BCPs) help organizations rapidly continue operations when faced with a difficult event or crisis. These plans are typically considered to be a subset of risk resilience plans, which provide direction to organizations on how to respond to a risk event.

This BCP guide provides instructions for customers on how to build a Risk Response Plan Tracker in Core. While this tool is also built-into and most used with the Risk Management app, it can be with a variety configurations or apps. Please note that the in-app BCP tool will have the most current information (as this guide is no longer being updated).

Should you have questions or would like Resolver's Professional Services team to assist you in this configuration, contact your Customer Success Manager at customersuccess@resolver.com.

> ⚠️ These configurations should not be implemented in your current production environment. Contact your Customer Success Manager to gain access to a temporary sandbox for testing.
