Create Relationships & References

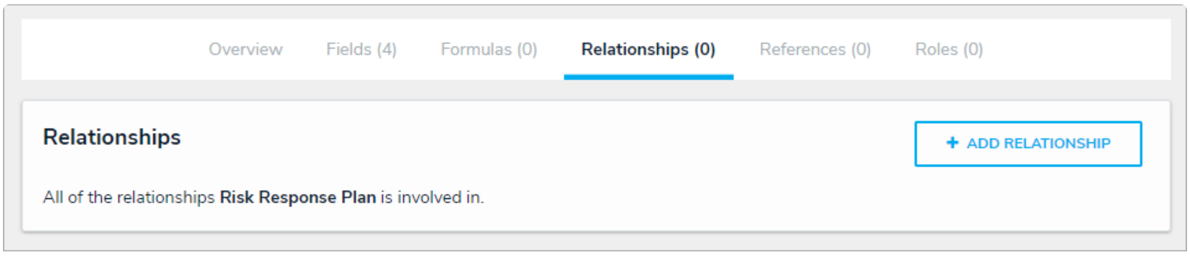
Last Modified on 04/22/2020 11:59 am EDT

This article provides instructions for creating relationships and references on **Risk Response Plans** between the **Risk** and **Requirement** object types. However, plans can be linked to other object types, including, but not limited to **Processes**, **Assets**, and **Vendors**.

For more detailed information on relationships and references, see the Add Relationships to an Object Type and References on Forms articles in the **Resolver Core Administrator's Guide**.

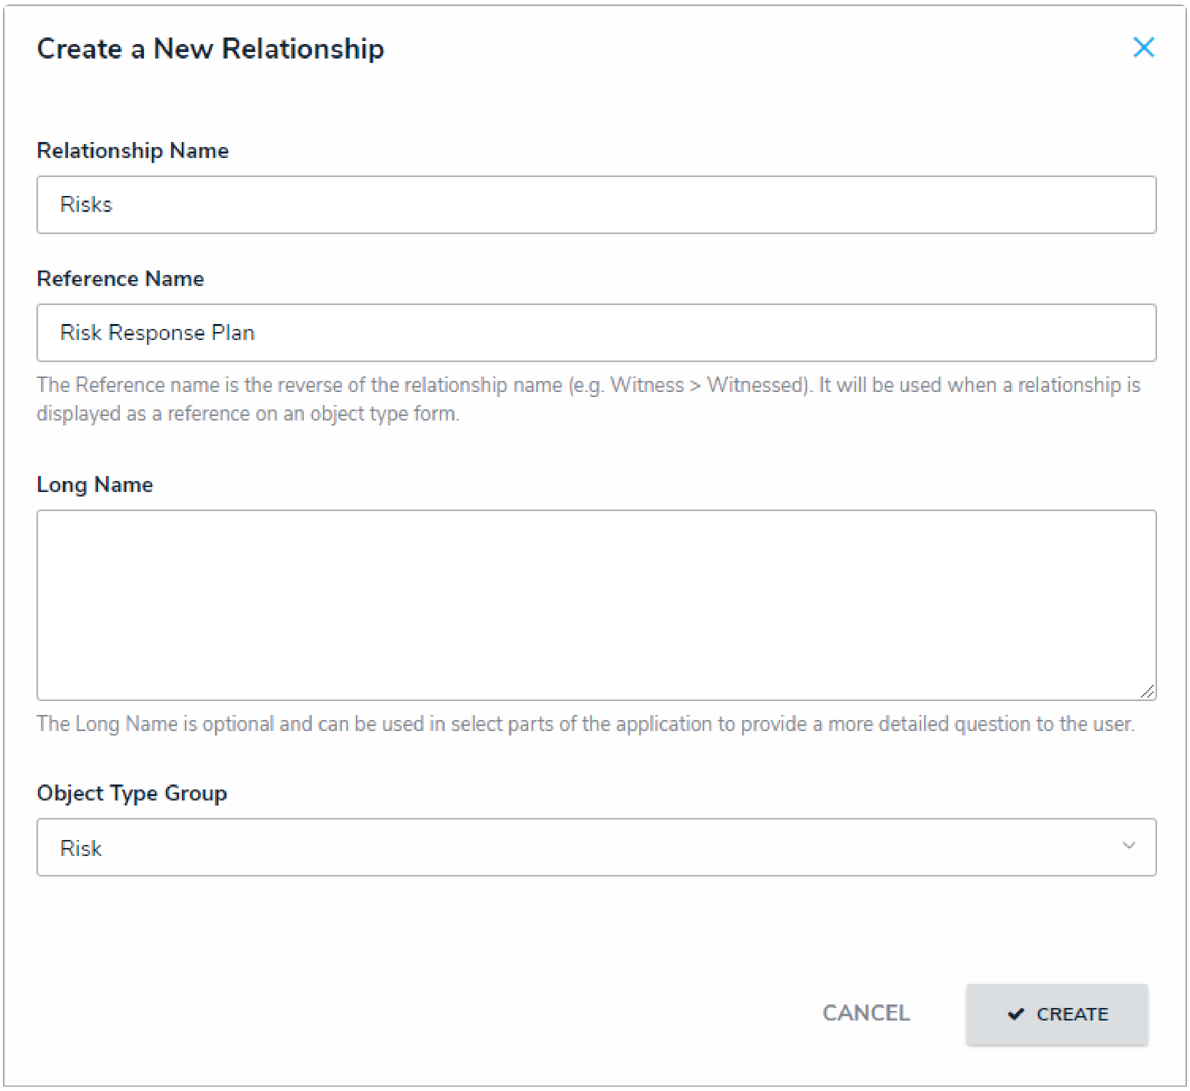
To add relationships to the Risk Response Plans and Company object types:

1. Click the icon in the top bar **> Object Types** in the **Data Model** section.
2. Begin typing **Risk Response Plan** in the search field, then click the object type to open the **Edit Object Type** page.
3. Click the **Relationships** tab > **Add Relationship**.



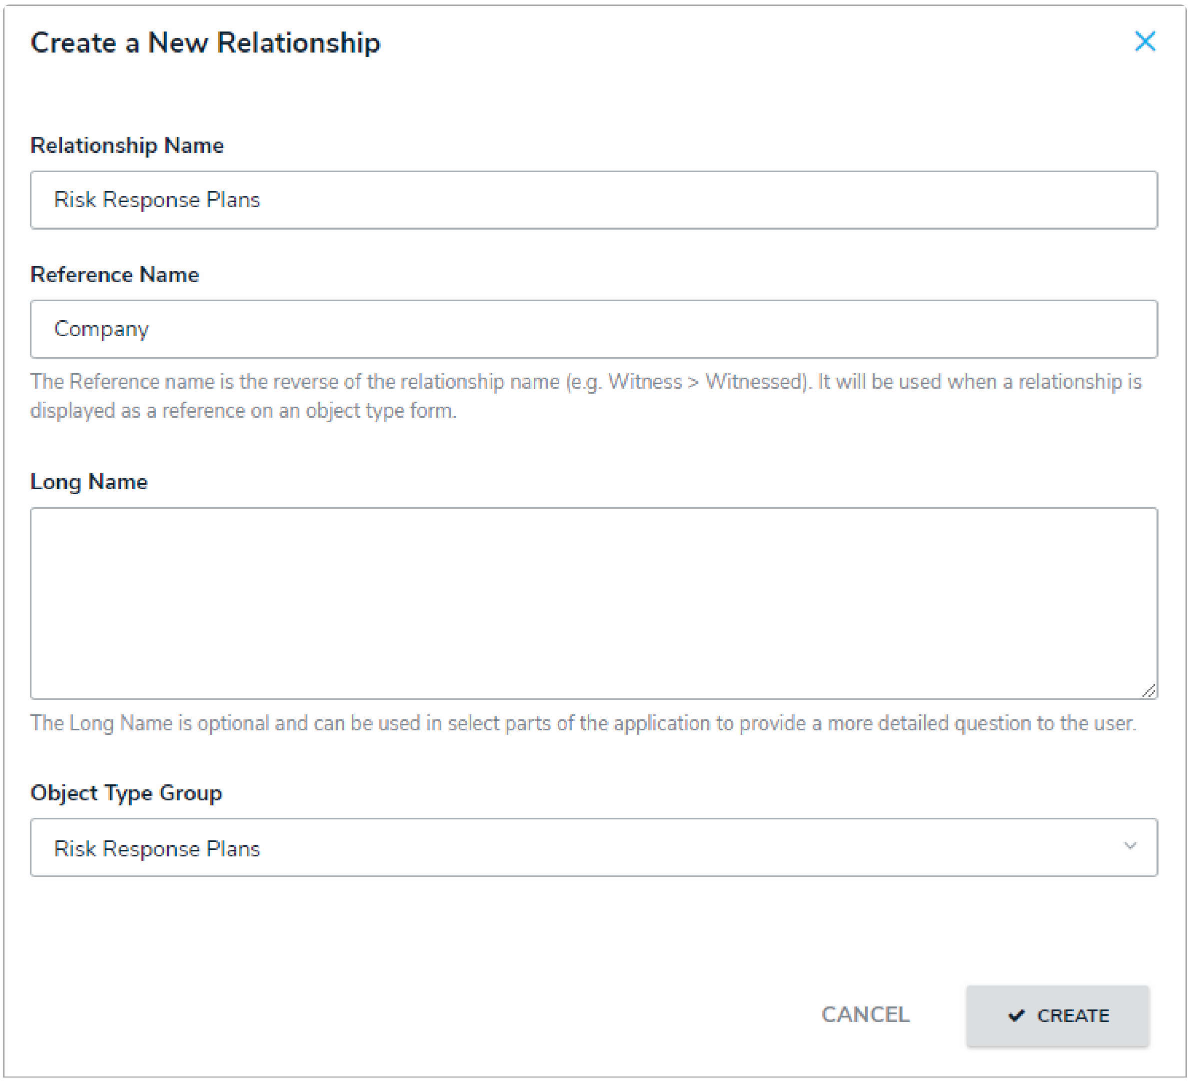
The Relationships tab.

4. Enter **Risks** in the **Relationship Name** field and **Risk Response Plan** in the **Reference Name** field.
5. Select **Risk** from the **Object Type Group** dropdown menu.



The Create a New Relationship window.

6. Click **Create**.
7. Repeat the steps above to create another relationship on the **Risk Response Plan** object type, entering **Requirement** for the relationship name, **Risk Response Plan** for the reference name, and **Requirement** from for the object type group.
8. Repeat the above steps for the **Company** object type, entering **Risk Response Plans** for the relationship name, **Company** for the reference name, and **Risk Response Plans** for the object type group. Note that you may use business units instead of company objects, however, this will impact the reporting structures discussed further in this guide.



The Create New Relationship window.
