

## Risk Team (Standard ERM)

The **Risk Team (Standard ERM)** user group is used to access the Standard Risk Management app. This app is a lightweight version of Risk Management that allows users to use simplified versions of forms and object types of the base application. As the user's business grows, the user can upgrade parts of the app to gain access to more information.

The Standard Risk Management app has access to much of the same features and object types with the same workflows as Risk Management. The following features and object types are **not** available in Standard Risk Management:

- Issues
- Key Risk Indicators
- Loss Events
- Incident Management Integration

All of the forms available in Standard Risk Management function the same way as the ones in Risk management, but with some simplifications made due to the missing object types and features. For example, the **Document Issues & Corrective Actions** section of the [Assess Risk](#) form has been renamed to the **Document Corrective Actions** section, and can have corrective actions attached directly to the risk, rather than to issues attached to the risk.

### Step 4: Document Corrective Actions ☰

To find existing corrective actions, click **Add Existing Corrective Action** at the bottom of the table. If a new corrective action is required, click **Create New** at the bottom of the table.

**Corrective Actions**

Unique ID	Name	Description	Priority	Expected Completion Date	Workflow State
<i>No data to display</i>					
<a href="#">Q ADD EXISTING CORRECTIVE ACTIONS</a>			<a href="#">+ CREATE NEW</a>		

[VIEW RISK PROFILE](#)

---

Click "Submit for Review" to send to the Risk Team for review. [SUBMIT FOR REVIEW](#)

Click "Escalate Risk" to raise this risk as requiring immediate attention by the Risk Team. [ESCALATE RISK](#)

*The Document Corrective Actions section of Standard Risk Management's Assess Risk form.*
