

Risk Team (Standard ERM)

Last Modified on 02/27/2025 10:10 am EST

The **Risk Team (Standard ERM)** user group is used to access the Standard Enterprise Risk Management (ERM) app. This app is a lightweight version of Risk Management (RM) that allows users to use simplified versions of forms and object types of the base application. As the user's business grows, the user can upgrade parts of the app to gain access to more information.

The Standard ERM app has access to much of the same features and object types with the same workflows as Risk Management. The following features and object types are **not** available in Standard Risk Management:

- Issues
- Key Risk Indicators
- Loss Events
- Incident Management Integration

All the forms available in the Standard ERM function the same way as the ones in RM, but simplified in places, due to the missing object types and features. For example, the [Assess Risk](#) form's **Document Corrective Actions** section, which can have corrective actions attached directly to the risk, rather than to issues attached to the risk.

Corrective Actions

To find existing corrective actions, click **Add Existing Corrective Action** at the bottom of the table. If a new corrective action is required, click **Create New** at the bottom of the table.

Unique ID	Name	Description	Priority	Expected Completion Date	Workflow State
CA-7	Action Plan 007	Has quem blandit splendide in. Sed ea corpora moderatius consectetur, per at homero nostrum. Et duo consulatu argumentum, mel eros imperdiet assentior ut. Vim facilis nominavi invidunt an, ludus virtute propriae usu te, pri assum debitis invenire cu. Sea ut vitae definitiones, verear vituperatoribus usu ne. Ex usu inimicus definitiones.	Low	November 8, 2018	Overdue
