

Version 3.3 (Security Risk Management)

Note: The following features are not added to Security Risk Management by default. For information on adding these features to your version of the app, contact your CSM.

New Features

UI Improvements

- Adjustments in form presentation have been made for the Auditor Admin and Auditor user flows. These include:
 - Adjustments to relationship tables to minimize color impact
 - Rearrangement of some fields due to feedback and previous workarounds for visual alignment
 - New simplified forms for viewing Location and Compliance Frameworks from Monitor Assessment
- Adjustments in report presentation have been made to the following reports: Incident Detail Report, Incident List Report, Open Incident List Report, Location Overview Report, Person Overview Report:
 - Rearrangement of some fields in repeating forms due to feedback and previous workarounds for visual alignment
 - All report tables that report on primary object workflow status will display colored ovals
 - Priority/Severity columns on report tables have been moved to the first column
 - Some report tables have been set to no color.
