Security Risk Management Introduction Overview

Last Modified on 02/24/2025 4:24 pm EST

Resolver Security Risk Management is a cloud-based system that provides users with a streamlined approach to security planning. This is achieved through built-in security audit functionality, and the ability to connect incident data to risks. Security Risk Management is an out-of-the-box solution, but your system may be customized according to your organization's specifications. For more information about custom solutions, contact Resolver Support.
