

Password Requirements in Security Risk Management

Last Modified on 04/12/2022 12:29 pm EDT

Your Security Risk Management password must contain at least 9 characters, which must include letters. Spaces are permitted.

When creating or resetting your password, you'll see a color-coded password strength indicator. Each color represents the following:

- **Red:** Your password does not meet any or most of the minimum requirements.
- **Yellow:** Your password does not meet some of the minimum requirements.
- **Green:** Your password meets the minimum requirements.
- **Blue:** Your password surpasses the minimum requirements.

The screenshot shows the 'Reset Password' interface. At the top left is the Resolver logo and the title 'Reset Password'. Below this is a 'New Password' label and a text input field containing four dots. To the right of the input field is a 'SHOW PASSWORD' link. Below the input field is a password strength indicator consisting of five circles: the first is red, and the others are white. Below the indicator is the text 'Add another word or two. Uncommon words are better.' At the bottom right is a 'SET PASSWORD' button.

The Reset Password screen. In this case, the password entered in the New Password field does not meet the minimum requirements.

Your password expires every 90 days. At the end of the 90-day period, you'll be prompted to change your password, following the requirements outlined above, after a successful login. If you forget your password, you can send a reset link to your email account by clicking **Change Password** at the login screen.

You cannot reuse your current password when resetting it after expiry or resetting it via email.
