

# Delete an Object

Last Modified on 04/20/2021 12:05 pm EDT

Depending on their [role permissions](#), both administrators and end users can delete objects. However, before an object can be deleted, you must review the **Deletion Request** warning, which outlines how deleting that specific object impacts other objects connected through relationships or references.

An object cannot be deleted when it's viewed on a navigation form or from the rightside editor palette.

## To delete an object:

1. Open the object form in full screen mode.
2. Click the  icon at the form's top-right, then click **Delete**.
3. Review the **Deletion Request**, which summarizes the number of impacted relationships and references.
4. Once you've ruled out negative impacts on those related/reference objects, click  to confirm.

A screenshot of a web page titled "Policy Compliance". The page has a header with the title and a "More options" menu (three dots) in the top right corner. A green box highlights this menu, and a sub-menu is open, showing a trash can icon and the word "Delete". Below the header, there is a blue pill-shaped button with the text "R-111.2". The main content area is titled "Assess and Treat Risk" and contains a paragraph of text. Below the text is a "Description" field with a text area containing the text: "Failure to provide monitoring controls against policy can negatively impact the ability of management to maintain the integrity of internal controls. This could promote fraud, compliance risk and loss of revenue." Below the description is a "Risk Owner" field.

*The Delete option at the top-right of the page.*

Deleting an object with relationships or references will delete that object's connection to those other objects, but it will **not** delete the other objects to which it was related.
