

# Add Roles to an Activity

Last Modified on 04/20/2021 12:05 pm EDT

All users, including administrators and those with [All Access](#) settings enabled, will not be able to see an application in the left navigation menu until they've been added to one or more activities through a [role](#). Note that adding a role to one activity with an application will not grant access to all its activities. Roles must be added to each activity individually in order to grant access.

Roles are saved to activities within an application. See the [Create an Application & Activity](#) section for more information on creating applications and activities.

If you've recently added your role to an activity, you will need to log out then log back in before the application and/or activity will be displayed in the left navigation menu.

## To add roles to an activity:

1. If needed, open the activity you wish to add the role to by clicking the  icon in the top bar > **Applications** in the **Application Management** section, then clicking the application and activity to show the **Edit Activity** page.
2. Click **Add Roles** in the **Roles** section.
3. Select one or more roles from the dropdown menu.

**ROLES**

*There are no Roles linked to this Activity*

Incident Creator × Managers × ▼

CANCEL ✓ ADD ROLES

*Roles selected, but not yet added to an activity.*

4. Click **Add Roles**.

To remove a role from the activity, click the trash can icon next to the role, then click **Yes** to confirm.
