

Assessment Section

Last Modified on 11/23/2021 1:12 pm MST

The **Assessment** section gives users an easy way to see all the assessments that an object has been added to already, add the object to assessments already in progress, and push any changes made to the object to all the assessments it is attached to. When enabling the section on a form, note that:

- The table contains the following columns:
 - ID - Assessment Unique ID
 - Assessment Name - Name of Assessment
 - Unique ID - Object Unique ID
 - Dimension - Dimension given to the Assessment
 - Workflow State - Current state of the Object
 - Last Sync - Date of the last push from library to assessment
 - Last Modified - Date of the last change to the object
- Clicking the ID of the assessment will open it in a palette.
- For existing objects, the table will show every assessment containing a clone of the object. For new objects, the table will be blank.
- Objects shared between assessments will be displayed in the table.
- If the user does not have permission to make changes to assessments, the table will appear in read-only mode.

Assessments

Review assessments where this object exists and push updates as needed to sync the assessments with the library.

Compliance Assessment

ID	Name	Unique ID	Dimension	Workflow State	Last Sync	Last Modified
