

Version 3.5 Release Notes (Risk)

Last Modified on 04/05/2023 5:13 pm EDT

Note: The following features are not added to Risk Management by default. For information on adding these features to your version of the app, contact your CSM.

New Features

Assessment Updates

- Users can now push new objects (e.g., new risks in a risk category) or push updates on pre-existing ones (e.g., a library objects' property or field change) to active assessments from the new [Assessments section](#) for select objects.
- While different business areas must make their own decisions around risks, controls, requirements, etc., this update helps ensure an organization always has a current, centralized view of their risk landscape.

Assessments
Review assessments where this object exists and push updates as needed to sync the assessments with the library.

Risk Assessment

ID	Name	Unique ID	Dimension	Workflow State	Last Sync	Last Modified
RA-1	Risk Assessment	R 9.1	CORPORATE	ASSIGN RISK O...		2021-09-27

Export Attachments

- Users can now easily export attachments from select [reports](#) across the app.

RM - Risk Assessment Status Report

This attachment export might take a few minutes to download depending on the number of files, size of files and your network speed

- Control
 - Strategic charters are documented
 - Supporting Evidence
 - strategic_charter.txt
