

## Version 3.5 Release Notes (Risk)

Last Modified on 09/29/2021 12:15 pm MDT

*Note: The following features are not added to Risk Management by default. For information on adding these features to your version of the app, contact your CSM.*

### New Features

#### Assessment Updates

- Users can now push new objects (e.g., new risks in a risk category) or push updates on pre-existing ones (e.g., a library objects' property or field change) to active assessments from the new [Assessments section](#) for select objects.
- While different business areas must make their own decisions around risks, controls, requirements, etc., this update helps ensure an organization always has a current, centralized view of their risk landscape.

#### Assessments

Review assessments where this object exists and push updates as needed to sync the assessments with the library.

##### Risk Assessment

ID	Name	Unique ID	Dimension	Workflow State	Last Sync	Last Modified
RA-1	Risk Assessment	R 9.1	CORPORATE	ASSIGN RISK O...		2021-09-27

### Export Attachments

- Users can now easily export attachments from select [reports](#) across the app.

## RM - Risk Assessment Status Report

This attachment export might take a few minutes to download depending on the number of files, size of files and your network speed

- Control
  - Strategic charters are documented
    - Supporting Evidence
