

## Version 3.5 Release Notes (Vendor Risk)

Last Modified on 10/01/2021 11:28 am MDT

*Note: The following features are not added to Vendor Risk Management by default. For information on adding these features to your version of the app, contact your CSM.*

### New Features

#### Ad-hoc Assessment Updates

- Users can now push new objects (e.g., new citations in a framework) or push updates on pre-existing ones (e.g., a library objects' property or field change) to active assessments from the new Assessments section for select objects.
- While different business areas must make their own decisions around risks, controls, requirements, etc., this update helps ensure an organization always has a current, centralized view of their risk landscape.

#### Assessments

Review assessments where this object exists and push updates as needed to sync the assessments with the library.

##### Vendor Assessments

ID	Name	Unique ID	Dimension	Workflow State	Last Sync	Last Modified
VA-1	Vendor Risk Assessment	CIT 204.1	MICROSOFT CORPORATION +1	SUBMITTED TO ...	2021-10-01	2021-10-01
