Assessment Section Overview

Last Modified on 04/05/2023 5:14 pm EDT

Depending on the object type, some library objects will contain an **Assessments** section as a tab within the form's header. This section will display tables (one per assessment type) that show all the existing assessments the object belongs to.

Users can click the **Add Assessments to Update** button to add the object to an existing assessment where its library parent object exists, or the **Update Assessments** button to push the updated object to all relevant assessments.

Note that the table contains the following columns:

- ID - Assessment Unique ID

- Assessment Name - Name of Assessment

- Unique ID - Object Unique ID

- Dimension - Dimension given to the Assessment

- Workflow State - Current state of the Object

- Last Sync - Date of the last push from library to assessment

- Last Modified - Date of the last change to the object

- Clicking the Unique ID of the object will its clone for that assessment in a palette.

- For existing objects, the table will show every assessment containing a version of the object. For new objects, the contents of the table will be blank until an update is pushed.

- Objects shared between assessments will be displayed in the table.

- If the user does not have permission to amend assessments, the table will appear in read-only mode.

The Assessments section as it appears on a form.
