

Version 3.6 Release Notes (Internal Audit)

Last Modified on 12/21/2021 1:58 pm EST

Note: New release features are not added to your app version by default. To enable a particular one within your org, please contact your CSM for more information.

New Features Clarified Data Changes with Data Audit Trail

- You can now get a clear historical record of changes to your risks, controls, regulatory requirements, and other data, alongside the organizational impacts of those changes.
- The Data Audit Trail has been configured to capture all field changes, with strikethroughs
 for removed data and highlighted text for new form data. For example, if the key data
 related to an issue has changed over time, Resolver Core automatically stores a simplified
 view of all historical changes made to the issue. That way, users can easily view what
 changes have happened to help inform management decisions. Users can then see if their
 controls adequately address the risks presented by updated obligations and determine any
 required changes in their assessment approach.

HISTORY		×
2020 Audit Plan	AP-1	A
	< 1 2 >	
	December 13, 2021 10:13 AM	
Updated Audit Capacity (Hours) from 5000 to 6000.		
	December 13, 2021 10:13 AM	
Updated formula % of Allocated Capacity to 0.		
	December 13, 2021 10:13 AM	
Cleared 0 from formula % of Allocated Capacity.		
	December 13, 2021 10:13 AM	
Updated Description.

Enriched Third-party Tool Integrations with Webhooks

Now data can be sent between Core and other systems in response to an event, as
opposed to the previous set schedule (processed hourly, daily, monthly, etc.). For example,
sending a Slack or Teams message can trigger Core to create and populate an object (e.g.,
an Issue or Corrective Action) based on that message's contents.

• This feature can also work the other way around. For example, if a Core event occurs, it can automatically create a Slack or Teams channel for discussing that item.

UI Enhancements

• Most reports are now set to landscape orientation by default.

End of Internet Explorer Support

Beginning in 2022, Core will be ending support for Internet Explorer 11. If you are currently
using Internet Explorer 11, we recommend that you switch to another supported browser.
Read more here about Internet Explorer becoming an End of Life (EOL) software.
