

Confidential Portal Overview

Last Modified on 11/06/2024 1:52 pm EST

Overview

The **Confidential Portal** is an application in the Admin User Interface that allows for the confidential submission of sensitive information. For example, an Incident Submitter wants to report something to their company but is concerned about backlash for disclosing sensitive information.

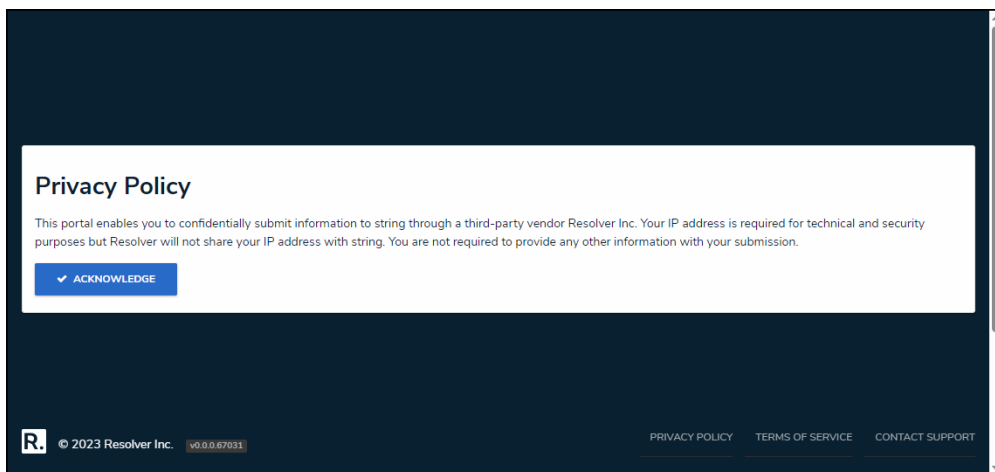

External and occasional stakeholders can access the **Confidential Portal** using the confidential Portal URL link provided by their Resolver Administrator or organizational partner.

Tip:

To increase security measures for **Confidential Portal** users, rate limiting on the number of logins to the **Confidential Portal** and on the number of submissions created during a session can be implemented on your Org. Please contact your CSM or the Services team if you're interested in enabling this feature.

A **Privacy Policy** screen will appear before users can access the **Confidential Portal**. The **Privacy Policy** screen outlines that the only information we track is their IP address. All portal users will see this form, regardless of whether they remain confidential.

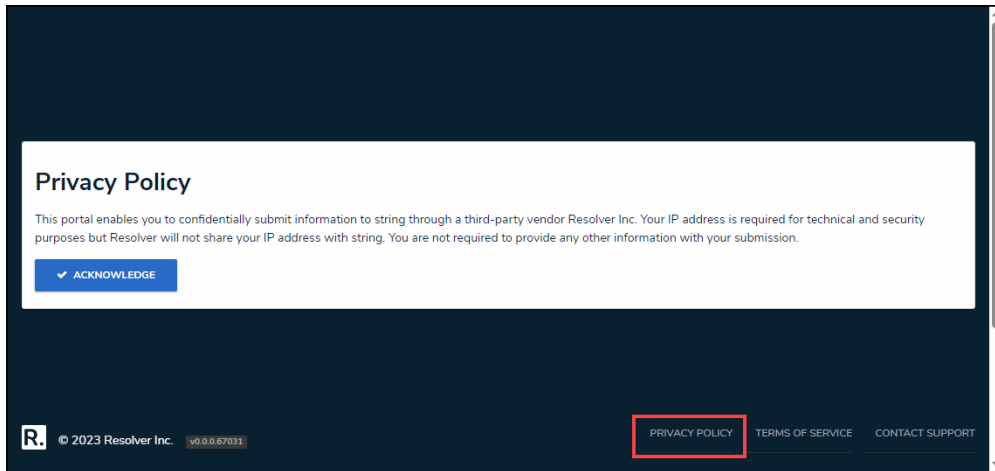

Privacy Policy Screen

Note:

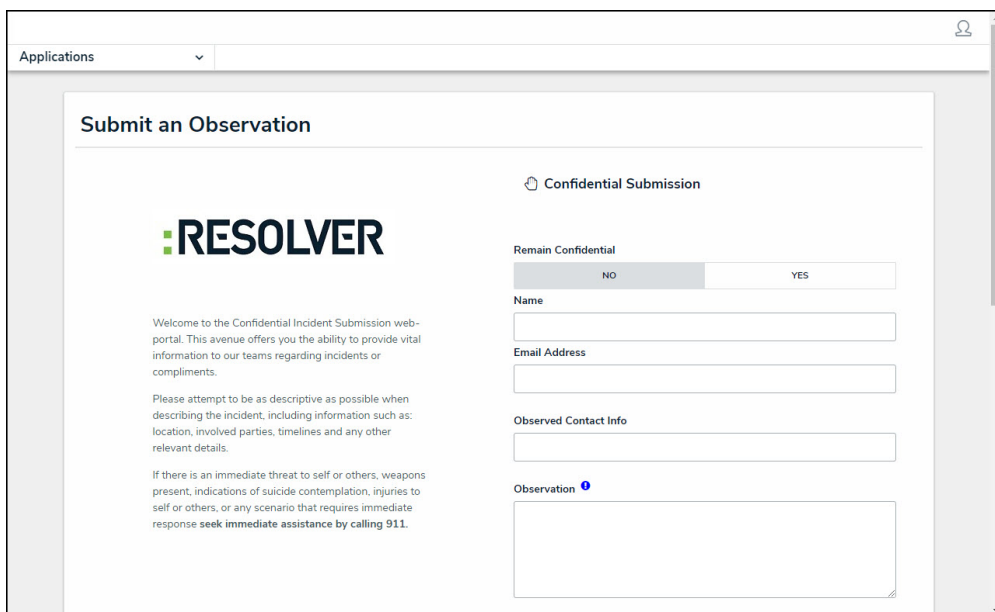

The **Privacy Policy** will automatically translate to the default language selected in the user's browser. If using Safari, Resolver will give preference to the Safari system language setting when the combined language and region isn't available in Resolver. [Click here](#) to see a list of supported languages for translation.

By selecting the **Acknowledge** button, the user is acknowledging that you read and understood the **Privacy Policy** found at the bottom of the screen by clicking the **Privacy Policy** link.

Privacy Policy Link

When entering their contact details on a Portal form, Submitters can decide if they want to remain confidential, and Resolver will generate an alias for them. Submitters do not require direct system access and can still reply and continue the conversation using a unique email object ID, hiding the Submitter's identity.

Confidential Portal

User Account Requirements

The user account you use to log into Resolver must have Administrator permissions.

Related Information/Setup

To generate a Confidential Portal URL link for an external stakeholder, please refer to the [Generating a New Portal URL article](#).

To create a Portal URL for confidential login, please refer to the [Creating a Portal URL article](#).
