

Release 24.2.1

Last Modified on 09/11/2024 10:43 am EDT

24.2.1 Features

Updates to the Administrator Settings Menu

Helpful icons have been added beside each of the screen names in the **Administrator settings** menu. In addition, the order of the Administrator settings have been rearranged in the menu to reflect the most used functionality.

Administrator Settings Menu

Note:

The **User Management** features listed below are only available to Administrators at this time.

From the **User Management** > **Edit User** screen in the **Administrator settings** menu, Administrators can now add and remove users from individual roles from a new dropdown menu under **User Role Membership**.

The screenshot shows a user interface for managing user roles. At the top, it says "User Role Membership" followed by "is a member of these roles". Below this is a dropdown menu with the text "Select which Role(s) this user is a member of". The dropdown menu is currently set to "Select one..." and has a "+ ADD" button next to it. Below the dropdown menu, it says "No user roles assigned".

User Role Membership Dropdown

For Portal URL Access users, Administrators can now manage Portal URL memberships directly from the **Edit User** screen from a new dropdown menu under **Portal URL Membership**.

The screenshot shows a user interface for managing Portal URL memberships. At the top, it says "Portal URL Membership". Below this is a dropdown menu with the text "Select which Portal URL(s) this user is a member of". The dropdown menu is currently set to "Select one..." and has a "+ ADD" button next to it. Below the dropdown menu, it says "Confidential Submission - Intake".

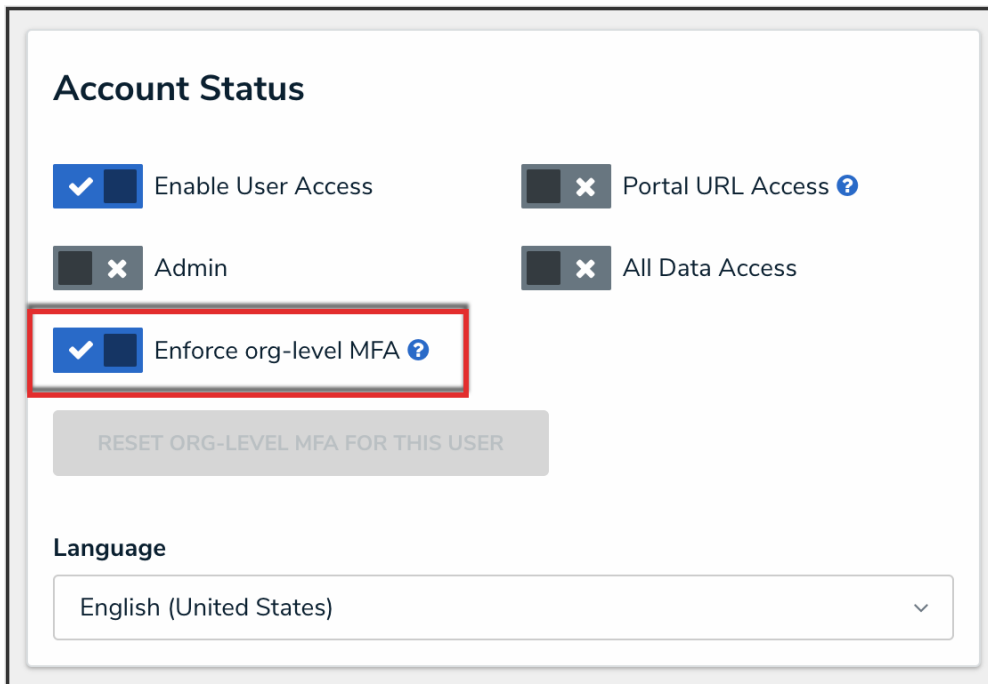

Portal URL Membership Dropdown

Note:

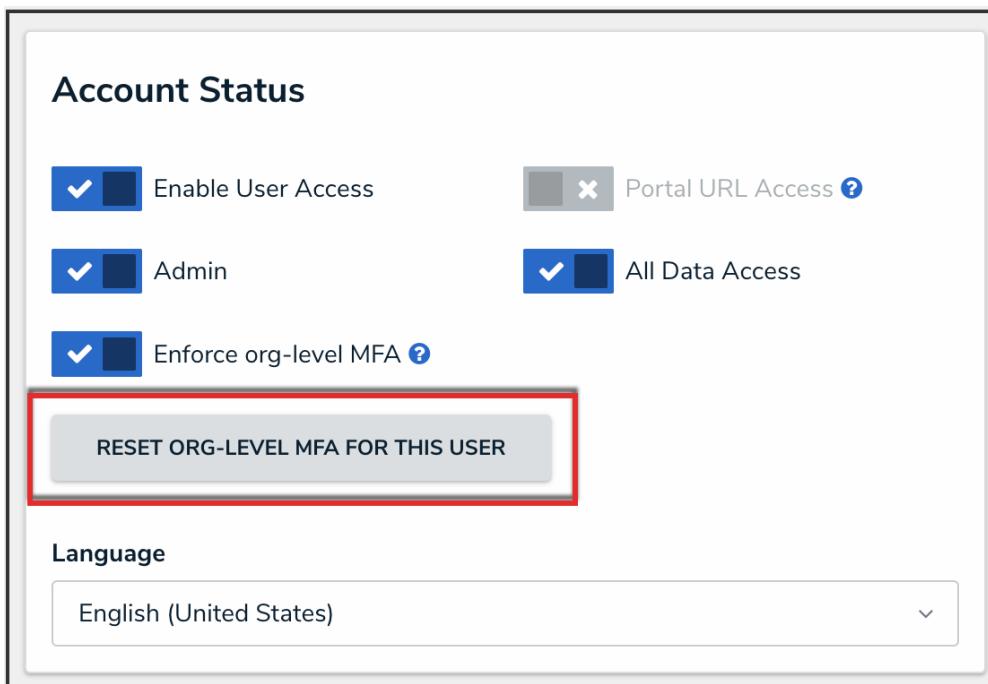

When adding a user to a Portal URL, a message will display confirming to either add a new Portal URL Access user or replace the existing Portal URL Access user.

For Orgs that have multi-factor authentication (MFA) enforced, there is now an **Enforce Org-level MFA** toggle switch on the **Create User** and **Edit User** screens that allows an Administrator to opt that user out of MFA for that Org.

Enforce Org-Level MFA Toggle Switch

Administrators can also reset MFA for a particular user from the **Edit User** screen with the new **Reset Org-Level MFA For This User** button.

Reset Org-Level MFA For This User Button

Supporting Documentation

Please refer to the following articles for further information on these **User Management** features:

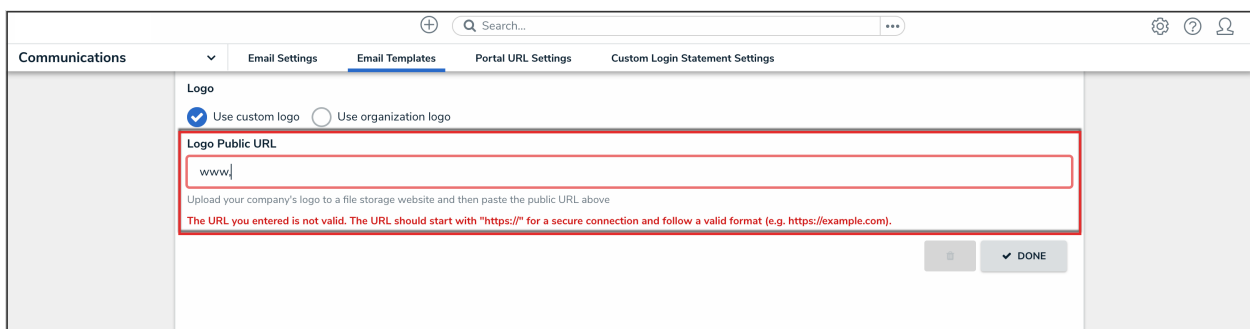

- [Edit a User](#)

- [Managing Portal URL Membership](#)
- [Multi-Factor Authentication](#)

24.2.1 Minor Features

URL Validation for Custom Logos in Email Templates

When an Administrator uploads a custom logo for email templates in Resolver, a URL validation will occur to ensure that the URL meets the validation criteria. If the URL cannot be validated, the following error message will appear: *The URL you entered is not valid. The URL should start with "https://" for a secure connection and follow a valid format (e.g. https://example.com).*

Benefits

- Validating URLs ensures that only valid URLs are used for a custom logo on email templates to prevent spam in email messages.

Duplicate Reports

Administrators can now create a copy of a report by clicking the **Copy Report** icon on to the **Edit Report** screen.

Benefits

- The **Copy Report** icon allows Administrators to create a copy of a report without having to create a new report from scratch.

Supporting Documentation

Please refer to the following article for further information on the duplicate reports feature:

- [Creating a Duplicate Report](#)

Add a Header and a Footer to Each Page of a PDF Export

Users now have the option to add a header and a footer to each page when exporting a report as a PDF.

Benefits

- Users can now include relevant information to the entire report via a header and footer on each page, reducing legal and compliance risks when a report contains confidential information.

Supporting Documentation

Please refer to the following article for further information on adding a header and footer to a PDF export feature:

- [PDF Output Options \(Report Logo & Header\)](#)

Merge Duplicates Action Description in the Data Audit Trail

The value for the **Merge Duplicates** action has been updated to include “by merging duplicates” at the end of description to provide clearer information to the user.

Time	Performed By	Object Unique ID	Object Name	Object Type Name	Action	Event	Value
July 16, 2024 1:51 PM	Default User core.admin@resolver.com	O1-4	OT1-ch3	OT 1	Merge Duplicates	Unassign Role	RT-4049510194neefUserFirstName RT-4049510194neefUserLastName unassigned from the ng role role by merging duplicates.

New Content Translations

Please review the file below for all new content translations added to the system.

[Release 24.2.1 Translations Update List.xlsx](#)

If your organization is utilizing the Language Translation feature, please download a new Language template (for your required language) and filter the **Language** column (last column) by empty cells, indicating new content. Any empty cells in the **Language** column must be translated, and the Language Template file must be uploaded to the system for changes. For further information, please refer to the [Add a Language](#) article.

Improvements

- Fixed an issue where nightly triggers were updating the Modified By property without any data change.
- Users will now receive a 413 error if the report or data grid they're trying to load is too large.

Bug Fixes

- Administrators can now delete a copied role without having to hard refresh the page to

validate the deletion.

- Loading objects, like Incidents, will now take less time.
- Fixed an issue where text went beyond the width of a text field so that it now fits within the text field.
- Fixed an issue with PDF exports so that it will now complete as expected.
- Users will no longer see a blue screen when creating a Risk from the Risk Object area.
- The extension on a file was mistakenly removed, making it unfindable in S3. The file was identified and resolved, and the export now runs successfully.
- When a user views a read-only form, the options will now be displayed as expected.
- A check will now be conducted on the user's logged in status and redirect them to the proper route.
- Users will now be navigated back to the assessment form when launching an assessment from the Palette view.
- Users will now be able to open the Trending & Analysis tab immediately after opening an object from the nav tree.
