

Troubleshoot Templated Reports Issues

Last Modified on 07/24/2025 1:52 pm EDT

Overview

Users may encounter some errors when using Templated Reports. Below is a table listing the most common Templated Reports errors with solutions.

Related Information/Setup

For more information on using Templated Reports, please refer to the Templated Reports section.

Templated Reports Troubleshooting

Error	Error Message	Troubleshooting Steps
Unmapped placeholder	"(# of unmapped placeholders) Placeholders found in Template that need to be mapped in configuration." This message will be followed by a bullet list of all unmapped placeholders.	 Add new variables in the relevant data series and apply mapping to unmapped placeholder(s).
Unmapped variables	"(# of unmapped variables) Variables found in configuration that need to be mapped to a Placeholder or removed." This message will be followed by a bullet list of all unmapped variables and which data series they belong to.	 Remove unmapped variables or apply mapping to an unmapped placeholder.
Variable conflicts	"(# of variables in conflict) are in conflict." This message will be followed by a bullet list of all variables in conflict and which data series they belong to.	 Update conflicting variable mapping so each variable is mapped to one unique placeholder.
